

Experiment / Mars lander

What should slow down your lander as it travels down through Mars' atmosphere?

What is necessary for your landing to become a success?
(You are welcome to put more crosses)

- We need to land soft and gently
- We need to land at a very precise location
- We need to land with the top up
- Other: _____

Which type of professionals know something about designing and building a Mars lander?

(Discuss in your group and note down three professions/educations)

1. _____
2. _____
3. _____

You are now ready to design your Mars lander!
